Add Member Process — Member Management System

Process Summary:

1. The process starts when the user opens the Member Menu and selects an operation.
2. If Add Member is chosen, the user enters member details, which are then validated.
3. If validation fails, an error is shown; if it succeeds, the member record is saved.
4. Either path leads to a success message being displayed, and the process ends.
5. If another operation is chosen instead, the user returns to the Select Operation step.
