

Sequence Diagram: Add Member Flow

Admin → Controller → Service → Repository → Database

Message Flow Description

Step	Message
1	Admin sends "Add Member" request to the Controller.
2	Controller calls addMember() on the Service layer.
3	Service calls save(member) on the Repository.
4	Repository issues an INSERT DATA command to the Database.
5	Database returns Success to the Repository.
6	Repository returns Success to the Service.
7	Service returns Success to the Controller.
8	Controller confirms "Member Added" back to the Admin.

Participants

Admin – the end user initiating the request to add a new member.

Controller – receives the request and delegates it to the Service layer.

Service – contains the business logic for adding a member.

Repository – handles data access and persistence logic.

Database – stores the member record.
